

Procedures Taken in Compiling 35mm Oblique Photography of the California Coastline, 1979

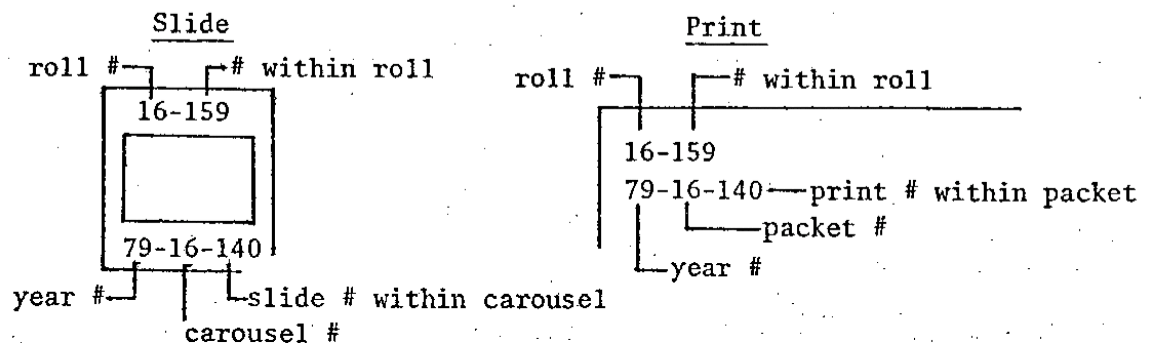

Starting with slides in carousels, (designated by roll number and name of area covered), and corresponding 35mm prints, (designated by roll number), the rolls of 35mm prints were broken up into a continuous north to south sequence. Each print was numbered (on the reverse side) to correspond to the numbers of the slides. Example:

NOTE: There were 37 rolls of film with rolls #9 and #25 being inadvertently exposed to light and destroyed.

With all the 35mm prints numbered to correspond with the slide numbers and in north to south continuous sequence, the print number sequence could be used to rearrange the slides into north to south continuous sequence.

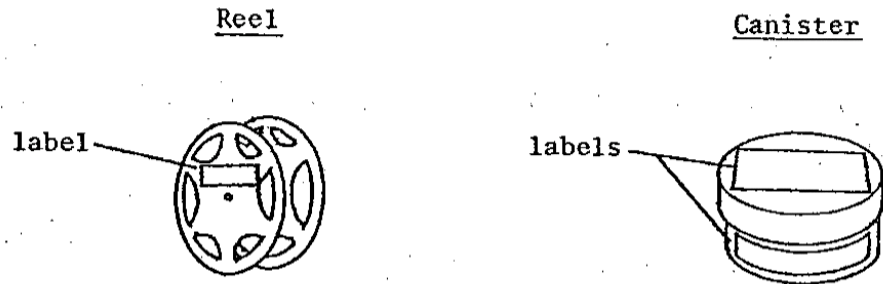

The slides were put in Kodak carousel 140 slide trays and each were labeled with year taken - carousel number - slide number within carousel, (example: 79-01-001). The corresponding prints were put into packets of 140 each (to correspond with the slides) and also given the corresponding number of each slide. Thus each print and matching slide has a roll number - print or slide number within that roll, and, year number - carousel or pack number - slide or print number within that roll or carousel. Example: (2-51) and (79-16-45), respectfully.

NOTE: One can use the number on the slide to locate the print or vise-versa.

The county name, county coastal mileage, and base map number was written on back of the 35mm prints. The mileage was obtained from a set of California coastline base maps.

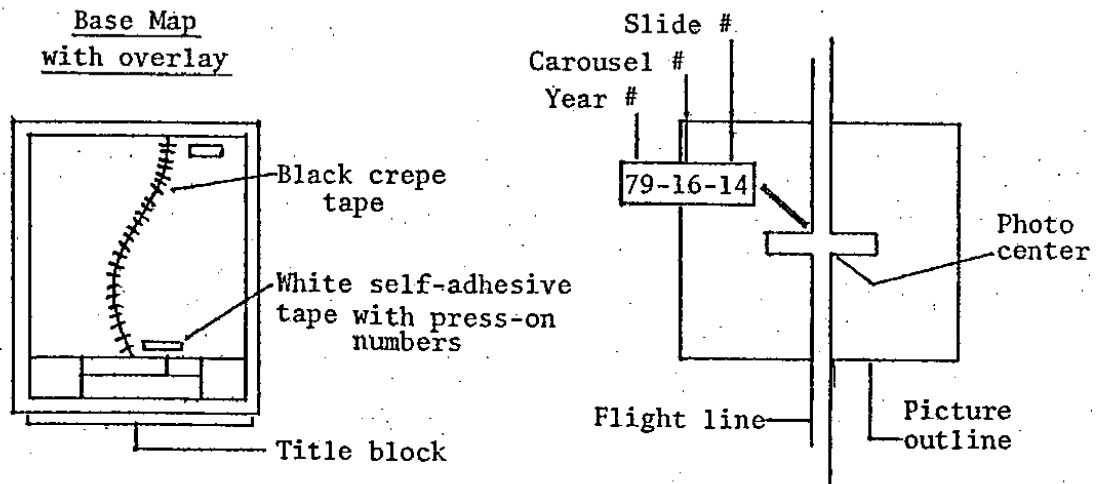

The negatives were spliced into north to south consecutive sequence to match the order of the 35mm prints. Each reel consists of one county with the exception of San Francisco and Marin counties which are on the same reel. Each reel has a canister that is numbered consecutively, starting with can #1 (Del Norte county) and going to can #14 (San Diego county).

Using the enlarged copies of the base maps (18"x24") and clear film overlays, the photo centers of each print was plotted along each flight line flown. Thirteen additional base maps were made up to cover areas of bays, rivers harbors, and esteros not covered on the available base maps.

Material used to plot photo centers on base maps:

light table (or other smooth cutting surface)
 x-acto knife
 burnisher
 ruler
 rubber cement
 right triangle
 black crepe tape (7 rolls of 1/8"x648")
 self-adhesive (typewriter) correction tape (2 rolls)
 Letraset Helvetica medium 14 point press on numbers (7 sheets of 10"x14")
 clear acetate plastic film (42" width) 2 rolls
 registration mark tape (clear type + markers) 1 roll

Explanation Block	County Name - Mileage	Map #	Department of Boating & Waterways
	Project Name		

The scale, north arrow, and map outline of California were used on the thirteen additional base map overlays. The explanation block and the title block were rubber cemented onto the overlays of each base map.

After the enlarged base map overlays were completed, they were sent out to be reduced to 8½"x11" size negatives. These negatives can then be used to make contact prints of the finished base maps on report size paper.

An index, of base maps and overlays, was compiled (by map number) including county, slide and print numbers, can number, time and date of exposure, and tide at time of exposure. The time and date of each film exposure was taken from flight logs and the tide was then figured using the appropriate tide table.

Base Map

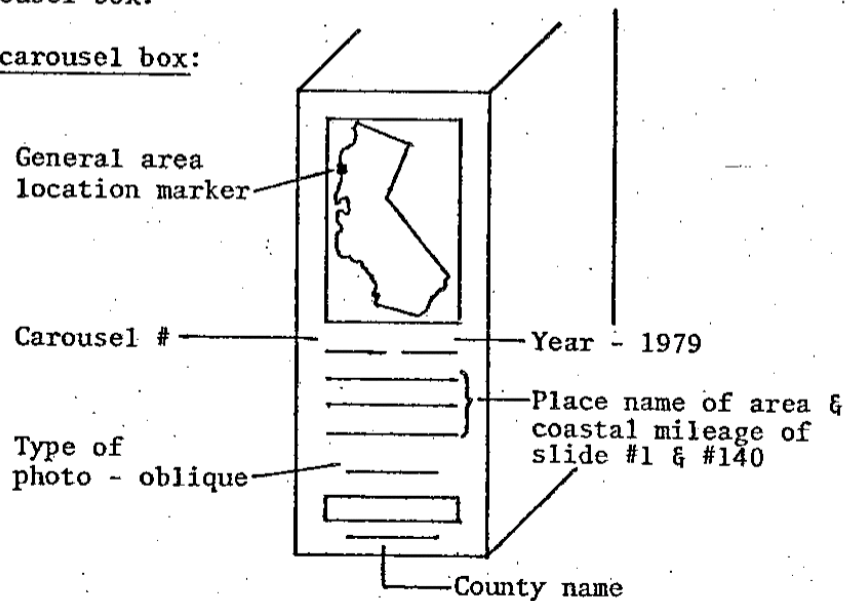

Print

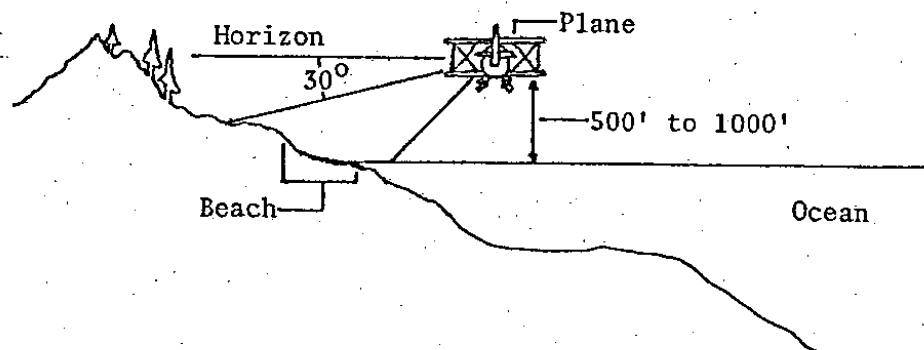

Coastal mileage	Index map #	County name
22-41 79-22-136	26 map #44 "Point Reyes"	Marin Co.
Place name on index map		

The base maps were also used to determine the place names of the first and last slides in each carousel. These names were used to label each carousel box.

On each carousel box:

NOTE: Oblique photography - The 35mm photos and color slides were shot from an altitude of between 500' and 1000' above sea level and at an angle of 25 to 30 degrees from the horizon line.
